## ATAP Workshop: Beginner's guide to acoustic telemetry data

The Acoustic Tracking Array Platform will be hosting a hybrid (in person and online) workshop on the 20 and 21 May 2026, beginning in the afternoon of the 20 May and ending at the close of business on 21 May. Through this 1.5-day workshop, we will:

1. Learn more about the current and emerging acoustic telemetry tools and equipment,
2. Learn more about the ins and outs of Fathom Central and Fathom Desktop (Innovasea software),
3. Some basic data processing, and
4. Basic data visualisation.

Dr Toby Rogers from Shark Spotters and Courtney MacSween from Innovasea will be joining as workshop facilitators. A basic understanding of the statistical programme R would be beneficial, but isn't crucial.

For planning purposes, please can you RSVP to [TS.Murray@saiab.nrf.ac.za](mailto:TS.Murray@saiab.nrf.ac.za) by Friday, 8th May, and indicate whether you will be attending in person or not OR [complete the google form](#). Please note that we do not have funds to cover in person attendance. All other information will be shared in due course.
